To Whom It May Concern

This letter is to recommend the Luing Pyrex fabrics and their associated apparel to any agency performing arduous work in hot, exhausting conditions.

The Luing Pyrex fabric as been tested and proven SAFE and EFFECTIVE to wear in even the hottest conditions physiologically tolerated by human skin without any danger to the bearer. The melting point of the fabric is far above the burn point of human tissue, therefore can be safely worn in adverse conditions. In addition the fabrics wicking potential and comfort level in high heat enables the wearer to work more comfortably, therefore safely, in even the most strenuous situations.

The fabric did not irritate or cause allergy, and even maintains an aesthetically clean and neat look, without odor, even after repeated use in adverse environments, maintaining a clean and sharp public profile for the wearer.

Should there be any other questions about our experiences with this fabric, please feel free to contact me at docrescue@gmail.com.

Sincerely

Dr. Patric Lausch
Firefighter / Emergency Doctor / Technical Equipment Manager
